opportunities around your campus.

TEACHING CIRCLES:

*Building community around
quality teaching using EML*

RIT's teaching circle was comprised of a group of faculty, all interested in learning more about EML. We read The Saber-Tooth Curriculum, which made us think about what we teach, and why we teach it. Teaching Circle members formed the core group of a June 2019 ICE Workshop held on campus, and some continued on to a Fall 2019 Teaching Circle where we are exploring EM201 and continuing to share best practices.

The greatest value from our Teaching Circle so far is that a group of 20 faculty from eight different departments in two different colleges have spent time talking about what we do and connecting around the common theme of mindsets and skillsets for the courses we teach; together, we are building a community of faculty and support system.
